

SUMMARY

Full-Stack Software Engineer with 3+ years of experience designing and building scalable web applications and SaaS platforms using React, Node.js, NestJS, and MongoDB. Experienced in system architecture, API development, and cloud deployments on AWS and modern hosting platforms. Strong focus on performance optimization, multi-tenant SaaS systems, and delivering production-ready solutions from concept to deployment.

WORK EXPERIENCE

Equitymatch, Software engineer - Developed and maintained scalable full-stack applications using React.js, Node.js, NestJS, and MongoDB. - Designed and implemented RESTful APIs and backend services with a focus on scalability, performance, and maintainability. - Built responsive, user-centric frontend interfaces, improving overall application usability and user experience. - Integrated Redis caching to optimize API performance and reduce response times. - Implemented and maintained Stripe payment systems for subscription and payment workflows. - Leveraged advanced AI-assisted development workflows and LLM tooling to accelerate feature delivery velocity and optimize code generation cycles. - Managed cloud infrastructure and deployments using AWS (EC2, S3, Lambda), Vercel, and Render. - Implemented CI/CD pipelines to automate testing, builds, and deployments, improving release reliability. - Collaborated with cross-functional teams on system design, feature development, and production issue resolution.	06/2024 – Present
Yara Technologies (Pvt) Ltd, Associate software engineer - Developed modern and responsive web applications using Angular, PHP, and REST APIs. - Built reusable frontend components and integrated backend APIs using Angular HTTP services. - Collaborated with backend developers and stakeholders on application architecture and feature planning. - Implemented error handling, form validation, and performance optimizations to improve application reliability. - Contributed to UI/UX improvements by developing intuitive and user-friendly interfaces. - Participated in Agile development processes including sprint planning, code reviews, and team collaboration.	10/2022 – 11/2023
Bluechip Technologies Asia (Pvt) Ltd, Internship - Developed frontend features and reusable UI components using React.js. - Integrated frontend applications with backend services and APIs. - Used Git for version control and collaborative software development. - Contributed to Agile workflows and team-based development activities.	07/2021 – 01/2022

EDUCATIONAL BACKGROUND

BSc. Special (Hons) – Information Technology, Sri Lanka Institute of Information Technology	2019 – 2023
GCE Advanced Level, Matara Central Collage	2016 – 2018

SKILLS

Programming Languages JavaScript, TypeScript, Java, C#, C++	Frontend React.js, React Native, Angular, Vue.js, HTML5, CSS3, TailwindCSS
Backend Node.js, NestJS, REST APIs, PHP, scalable backend services	Databases MongoDB, MySQL, PostgreSQL
Cloud & DevOps AWS (EC2, S3, Lambda, CloudWatch, IAM), Azure, Docker, CI/CD Pipelines, Vercel, Render	Version Control Git, GitHub, GitLab, Bitbucket

LANGUAGES

Sinhala: Native, English: Professional

PROJECTS

WebPulses AI – AI-Powered Website Analysis Platform

- Built a full-stack SaaS platform for website performance analysis and diagnostics.
- Developed frontend using Next.js and backend services using Node.js/NestJS.
- Integrated website performance insights, SEO checks, and technical diagnostics.
- Managed deployment and hosting of full-stack applications using Vercel and Render.
- Collaborated with cross-functional teams to deliver high-quality software solutions.
- Experienced in frontend architecture, responsive UI development, and API integrations.

General Election 2025 Real-Time Results Platform, Swarnavahini

- Contributed to the development of a real-time General Election 2025 results platform for Swarnavahini, working alongside senior engineers.
- Built systems supporting live data visualization and real-time result aggregation during nationwide election coverage.
- Contributed to frontend development using Next.js and backend services using Node.js and NestJS.
- Supported high-traffic performance optimization during peak live event usage.

NFC + QR Event Invitation & Multi-Scene Check-in Platform (MVP), DS College Award Ceremony

- Built a browser-based event invitation and attendance management system using NFC and QR, eliminating the need for mobile applications.
- Developed a full-stack platform using Next.js (App Router), Node.js API routes, and MongoDB Atlas.
- Designed an admin dashboard for event creation, guest management (CSV upload), scene configuration, and reporting.
- Implemented a smart invitation system with unique invite links supporting RSVP and mobile-first user experience.
- Built a real-time multi-scene check-in system (Entrance, Lunch, Gift, Photo, etc.) supporting staff-based attendance tracking.
- Integrated NFC-based workflow where scanned tags trigger real-time check-in actions via browser.
- Developed reporting features including attendance summaries, per-scene analytics, and CSV export functionality.
- Implemented authentication using NextAuth with role-based access control for admin and staff users.
- Deployed production-ready application on Vercel with MongoDB Atlas integration.

Digitized.lk – Multi-Tenant NFC Business Card SaaS Platform

- Designed and contributed to the architecture of a multi-tenant SaaS platform for NFC-based digital business cards supporting organizations, teams, and employees.
- Built a subdomain-based multi-tenancy system (*.connect.digitized.lk, *.app.digitized.lk) with full tenant isolation using organization-scoped data.
- Developed a full-stack system using React (Vite), NestJS, and MongoDB with API-first backend architecture.
- Implemented core backend services including organization management, employee systems, templates, and team structures.
- Designed middleware-based tenant resolution using subdomain extraction and request-level organization context injection.
- Defined scalable data architecture supporting flexible JSON-based cardData and templateData models.
- Implemented subscription-based package limits (e.g., employee limits per organization tier) with enforcement at service layer.
- Designed system supporting NFC/QR-based digital identity sharing with real-time profile access via public connect portal.
- Applied secure multi-tenant isolation ensuring all queries are scoped by organizationId.
- Deployed as a scalable SaaS-ready architecture supporting horizontal scaling and future enterprise expansion.
